SONICWALL®

SonicWall Improves Network Efficiency and Security for Ajman University

Premier UAE university optimizes connectivity and ensures robust cyber protection with SonicWall.

Business Need

Founded in 1988, Ajman University is a leading UAE institution known for innovative research and academic programs. Facing persistent network congestion and internet performance issues due to growing staff and student numbers, the university required robust solutions. Over 7,000 daily users, including faculty, staff, and students from 70+ countries, needed uninterrupted connectivity. Safeguarding sensitive academic and personal data was a top priority, but the existing network infrastructure couldn't meet these demands.

Solution

After extensive research, Ajman University adopted SonicWall's advanced solutions and has trusted them for over nine years. Starting with the SuperMassive series, the university later upgraded to the NSa series and, most recently, the NS*sp* series. SonicWall's tools optimized bandwidth by balancing traffic from multiple ADSL lines and enhanced cybersecurity with Capture Advanced Threat Protection (ATP) and next-generation firewalls. Centralized security management simplified network monitoring and maintenance, even during peak usage.

Results

SonicWall solutions transformed Ajman University's network performance, ensuring reliable connectivity, faster internet speeds, and minimal downtime. Enhanced security measures protected against cyber threats, creating a safer digital environment. Centralized management streamlined IT operations, reducing costs and improving resource allocation. The university praised SonicWall for resolving inefficiencies and congestion with exceptional reliability and performance.

"SonicWall transformed our network, providing unparalleled efficiency and security for our diverse academic community."

Inas Abousharkh
Director of Information Technology, Ajman University

Benefits

- Dramatically improved internet speeds
- Reduced network congestion
- Enhanced user experience and faster access to online resources
- Robust protection against advanced cyber threats

Solutions at a glance

- NS*sp* Series
- Capture Advanced Threat Protection (ATP)
