

Panayır Tekstil Strengthens Network Security and Efficiency with SonicWall Solutions

SonicWall's advanced security products and robust partner support enable Panayır Tekstil to safeguard its operations and optimize its infrastructure.

Business Need

Panayır Tekstil, a leader in home textile woven fabric production, sought a security solution that could effectively protect against internal and external threats while optimizing network performance. Previous solutions from other vendors lacked the sophistication and flexibility required to meet the company's needs, such as secure remote access, effective bandwidth management and advanced attack mitigation.

Solution

To address these challenges, Panayır Tekstil deployed SonicWall's TZ and NSa series NGFWs, including the TZ150, TZ350, TZ400, NSa 2700, and NSa 3700. These solutions enhanced security across the network and minimized vulnerabilities. Key features like SSL VPN for remote access, sandboxing for secure file transfers and strong data flow capabilities via SFP ports significantly improved operations.

SonicWall's flexibility allowed Panayır Tekstil to configure rules and roles tailored to their business needs, while SonicWall's trusted partner, IT-PORT, provided expert guidance and technical support, ensuring a seamless deployment.

Results

SonicWall's solutions transformed Panayır Tekstil's network security and operational efficiency. Internal and external vulnerabilities were minimized, advanced attacks intercepted and file security strengthened. The company also benefited from faster problem resolution and seamless data flow, enabling uninterrupted operations and higher customer satisfaction.

Benefits

- Enhanced protection against threats
- Improved data flow and structured rule management
- Reliable SSL VPN and RDP protocols
- Quick technical support

Solutions at a glance

- SonicWall TZ Series
- SonicWall NSa Series

PANAYIR

"The key to satisfaction in business is having robust support at all levels, and with SonicWall and IT-PORT, we've achieved unmatched security and operational efficiency."
