

Microexcel's Project Server Upgrade to 2013 Version Enables Top Health Insurer to Enhance Productivity and Reduce Operational Costs

The Client is a one of the top ten health insurance companies in America providing services to over 100 million Americans

Industry: Health Insurance

Business Need: The Client wanted to improve its capabilities to manage SharePoint/Project servers which were decentralized across two different farms. They were also looking for out - of - box solutions which will reduce their dependency on custom code solution which will lead to easier maintenance of application and reduced operational cost. Additionally, the Client is also looking for a service provider who can provide robust support with better disaster recovery capabilities.

The responsibility of this migration was assigned to Microexcel as it has considerable experience in Microsoft Project Server related projects and is an ongoing support provider to many of the Client's key SharePoint and IT initiatives.

Solution: Microexcel recommended to use a major hosting provider for this Project Server 2013 migration initiative. Since Project Server runs on top of SharePoint, Microexcel migrated and upgraded the existing SharePoint 2010 content hosted by the provider and implemented this via a new Web Application on the new Project Server 2013 farm. Thus consolidating the management as well as the maintenance of these hosted environments. The ability to add/ update the business information at the portal

Benefits:

- A lot less dependency on the custom solution and custom coding
- 99.99% uptime and a robust support
- Simplified sign on process as this version is hosted on the cloud
- Less overhead cost
- Better disaster recover features
- Better reliability
- Newer version of project server 2013 which provides a lot many new features leading to better productivity
