

CREATED APPEALING 3D DISPLAY UNIT DESIGNS FOR A TOP CANADIAN MARKETING AGENCY

The Client

Flatworld Solutions was contacted by a Canadian company that manufactured display units for cosmetics companies. They were looking for a partner that could assist them with AutoCAD detailing, in an effort to help them address the growing needs of their ever-expanding client base.

They found Flatworld Solutions online and elected our services when they learned more about our AutoCAD detailing experience as well as our ability to meet their deadlines for affordable costs.

The Problems Faced by the Client

The client has long catered to a substantial client base, which means that the needs of that client base are constantly evolving. Every display unit had to be designed for showcasing different types of products in different environments, from malls to retail outlets and more, and the displays were also being changed seasonally. This meant that there were many designs to be created for different types of displays.

FWS' Solutions

Flatworld Solutions put 18 resources on the job, each one with the background and knowledge necessary to ensure proper completion. The client sent over their AutoCAD and SolidWorks format files and materials, along with Planograms and an outline of the shelves. The Flatworld Solutions team successfully created 3D models from the designs provided. A total of 75 designs were completed each week, and all the drawings had to be prepared for CNC format.

The Results

The client was pleased with our timely project delivery at extremely affordable rates. They found that the work exceeded their expectations and turned out to become one of our long-term clients who continued to send more work to Flatworld Solutions every week, relying on us for high-quality 3D models. At Flatworld Solutions, our commitment to global quality standards helped us successfully complete the client's AutoCAD project.

Avail Professional 3D Modeling & Rendering Services at Flatworld Solutions

Flatworld Solutions is an outsourcing company offering professional [mechanical engineering services](#) including [3D rendering, modeling, and drafting services](#) to global clients. Being in the industry for over 16 years now, we have rich multi-domain industry experience in providing 3D models. Apart from 3D modeling, we also provide 3D part modeling, CAD conversion and migration, etc.

Take some time to have a look at what our [happy clients have to say](#) about our services.
