

Case Study

WatersWebWorks

10+ years and keeps getting better and better! It was simply the most customizable product I could find. Their pricing structure is fair and reasonable, especially for smaller companies.

Custom Data Applications
and Web Development

I started out programming in TeamDesk over 10 years ago for a single client. I programmed for them for 5 years before starting my own business programming primarily in TeamDesk. If you are in a niche market or work remotely this is the program you need. We've programmed HIPAA compliant patient management, sales, inventory, fleet management, rental management, office processes, truck-driver compliance, and the list just goes on.

I've been programming TeamDesk databases for over 10 years. They have been super responsive to client input and requests for new features.

Every time I find something I don't like I can talk to them to find out why it's like that or make a suggestion for a change. Users can also "vote" on people's suggestions so they are working on what their clients really want.
