

Ačiū

Thrive Tools Used

Ačiū (“thank you” in Lithuanian) is a *gorgeous* Thrive Theme Builder website focused on helping travelers plan their first trip to Europe. It uses large, vibrant images to show off destinations and tease the experience of discovering new cultures. Designed by Oliver Froese using Thrive Theme Builder, Ačiū is a visually impressive website that puts the emphasis on blog content to create a great opportunity to drive high-commission referrals to affiliate partners.

We love these features...

Stylish Sticky Transition Header that changes style as you scroll

The Ačiū website features an impressive header and navigation that is always *visible* AND *automatically changes* to best match the needs of the reader as they scroll. This *Sticky Transition Header* looks professional and helps visitors to find Oliver’s content anywhere on the page.

 Thrive Theme Builder

Grow an email list faster by offering a free eBook lead magnet

Sometimes visitors need a little push to encourage them to subscribe, and that’s exactly what Oliver’s *lead magnet* eBook achieves. He uses Thrive Leads to feature a compelling *opt-in offer* (with a stylish lightbox) to grow his email list *quickly*.

 Thrive Leads

Supercharge blog posts with dynamic Table of Contents

As a content publisher, Ačiū helps readers quickly navigate content with a *dynamic Table of Contents* element on each blog post. This *automatically* displays and links to headings, so readers can find the content they need. It’s also fully customizable!

 Thrive Theme Builder

Oliver Froese
at Ačiū

I’m always looking to learn new ways to improve my site. Thrive Suite has allowed me to implement new strategies I have learned quickly and easily without the need for constantly adding new plug-ins.

The templates in Thrive have given me a professional look right out of the box, so I spend less time designing and more time on what matters, content, yet I can go back and adjust any element to make it unique enough to be my own.

Thrive Suite has so many tools in one package, which gives it so much value. I can’t imagine building a website without it.
