Aerospread and KTL Transport – Hawke's Bay, NZ

KTL Transport – we already were using xero and Eroad so MyTrucking was an easy decision – a user friendly system from driver to dispatch to accounts, we managed to manipulate MyTrucking to also check log book compliance and health and safety on a daily basis.

Aerospread – I understand were the first aircraft operator using the system. We already knew MyTrucking would improve our dispatch, operations and accounts side of the business but we needed a system to tick the boxes around safety. All New Zealand aircraft operators are currently undergoing SMS certification, working with MyTrucking they were able to give us the ability to add attachments to jobs. Using this feature has given us the ability to comply and enhance our hazard reporting and risk management required for SMS certification. We're really excited about the development side of MyTrucking and are looking forward to further developing our ideas together.

With both companies using MyTrucking it has given us the ability of real time exact tonnages and information, which helps efficiencies and quality of job. Combine this with the safety documents attached to each job, and bulk truck driver, loader truck driver, any ground crew, pilot and operations staff all have the same information regarding health and safety.
