

Aquai.

The Smart Water Company.

Aquai's mission is to apply technology to the development, manufacturing, and distribution of products that detect and stop water leaks and proactively prevent catastrophic damage and waste in both residential and commercial properties.

Current solutions do not address the need in a holistic manner. Aquai connected its sophisticated IoT sensors and mobile apps to NetObjex's Digital Twin platform for machine learning, analytics and blockchain technologies.

NetObjex is helping innovative companies such as Aquai bring exciting new innovation to life.

NetObjex has been a trusted partner in assisting Aquai to develop state-of-the-art IoT capabilities in the Smart Water Sensor domain.
