

Customer story

Unique competitive advantage through experiment analysis

Need: In order to properly understand the competitor landscape, they need to extract and systematize the experiment data from each published patent.

Solution: The Extract tool allows each researcher, through a simple drag-and-drop effort, to automatically extract all experiments data from a patent and fill it into an organized layout. Experiments and corresponding outcomes are grouped, units are aligned and a confidence score gives the researcher knowledge on accuracy.

Weeks of manual labor can now be done in minutes, at human level accuracy (94% precision / 83% recall), and the team can do more extensive landscape analysis.
