

How Monday.com Enhanced Their UI Testing with Reflect

RESULTS

0% errors

Achieved 0% UI errors in production, ensuring a flawless user experience

Efficient

Significantly reduced manual testing efforts, saving valuable time

Fast

Received real-time notifications of UI changes, speeding up localization checks

Since adopting Reflect, we have no UI errors in production. Like, 0%. It's like we can't miss UI things. Any issues are caught in our staging environment. They don't make it to production."

*Merom Cohen,
Developer at Monday.com*

Overview

Monday.com, a leading provider of work operating systems, aimed to improve their UI testing process to ensure a seamless and consistent user experience across their platform. By integrating Reflect, Monday.com was able to streamline their testing workflows, enhance UI comparisons, and significantly reduce production errors.

Approach

- Needed a tool for comprehensive UI comparison and testing
- Required a solution that integrates seamlessly with existing workflows and tools
- Leveraged Reflect's intuitive interface and capabilities during the implementation phase
- Focused on using Reflect to cover sign-up flow and other critical UI elements to ensure consistency

Benefits

Monday.com utilized Reflect to centralize their UI testing efforts and increase test coverage, resulting in a more cohesive and efficient workflow, and without jeopardizing release deadlines. The platform's flexibility allowed the team to tailor it to their unique processes, fostering an environment of continuous improvement and innovation.
