

# CCSBSO Website

The [Central American Council of Superintendents of Banks, Insurance and Other Financial Institutions](https://www.ccsbso.org) was created to work as an associative element between Central American countries to ensure the application of the financial practices to ensure the stability of each country.

We structured, designed and developed an all new website for them using Drupal 7, this website is integrated with a web application where users can log in and manage financial reports, import reports, view reports, and export these reports in Excel spreadsheets. Amongst that we implemented a user administration module that is regulated by roles and permissions.

## Client

Superintendency of Banks of Panama

## Project information

## Case highlight
