

A Treasure Trove of Syncfusion Controls

"I was glad I could find a good option with Syncfusion. I like the support and there are a lot of nice controls."

— César Burbano, CEO
B-Soft Solutions

BENEFITS

Saved about 60% of development time.

Easy-to-use controls.

Good support.

CHALLENGE & SOLUTIONS

When the software you're trying to build has to be presented in a very specific way and interact with some of the most popular software in use today, finding components that do both seamlessly is like treasure hunting when you're not sure that "X" on the map isn't actually a decorative seagull.

César Burbano of BSoft was trying to develop software for strategic planning and managing processes using ASP.NET MVC. In his quest for suitable controls, he was forced to discard a diagram component from one vendor that wouldn't work in HTML, and a Gantt control from another that wouldn't export to Excel.

"For one project, I needed controls that could work with input like Microsoft Project does," said Burbano. "But I also needed them to be friendly and easy to work with, like Syncfusion's Gantt control ended up being."

After extensive hunting through other vendors' offerings, Burbano decided that Syncfusion's Gantt, spreadsheet, and diagram controls were the X marking the spot, after all. He estimates that his team saved 60% of their development time by using them. "Really, Syncfusion is very good," he said.

He's enjoyed the quick support from Syncfusion, utilizing the samples sent to him upon request, and treasured the time he and his team have saved on development even more.
