

CIVILIAN AGENCY

Enterprise Software Licensing and Management

As Prime contractor, Affigent provided a large division of a civilian agency an enterprise license agreement for over 80,000 users of Oracle Database Enterprise Edition. Accompanying the licenses Affigent provided comprehensive system support, including software security alerts and updates, patch management, license management, customized training, compliance guidance, and program management. Affigent delivered improved productivity, better access to the right information, and a single source to obtain the licenses and services needed to meet mission requirements.
