Clinitraq.

Smart Radiation Dosimeter Technology.

Clinitraq produces Real Time Location Based Radiation Dosimetry IoT technology which helps to capture and analyze radiation data for healthcare workers.

Clinitraq's groundbreaking new technology in the field of radiation dosimetry reduces the time for measuring cumulative doses from 60 days to 60 seconds. Many other firsts include cloud storage, Over the Air firmware updates, Machine Learning, and Blockchain integration.

Clinitraq turned to NetObjex to help develop its hardware, firmware while leveraging NetObjex's Digital Twin Platform. NetObjex helps bring new scientific ideas to life.

The Clinitraq Smart Dosimeter technology is built on the NetObjex IoT-Blockchain Platform. These technologies are poised to change the face of how medical care is administered globally and we are glad to be partnered with NetObjex.
