Customer Case Study

—

Cloud based software leader that provides solutions for largest international customers, stored and processed client data in one centralized platform.

Requirements

Data residency for what is considered regulated data

- Store and process customers data in more countries including different records in different countries in compliance with local data regulations.

- To enable clients to comply with international standards and requirements in more countries

Solution

InCountry data residency integration was deployed

- All data can be stored in a specific country, or logic can be applied to use an existing data field such as Country to direct storage to multiple countries.

- No changes in infrastructure management and provision for the end users

Result

Customer compliant with industry regulations and standards

- No changes in infrastructure management and provision for the platform users and minimal development expenses on integrating the InCountry Data Residency for customer solution into the existing business processes.

- Covering new markets
