

The Future of Document Review: A Top Lit Boutique Embraces DISCO Auto Review

 **21,000**
docs per hour **95%**
recall **91%**
precision

When a Fortune 500 company faced a high-stakes breach of contract lawsuit, a Top Lit Boutique found themselves working with a compressed timeline. The court unexpectedly ordered the parties to substantially complete discovery in just **five weeks**, leaving their lean team with **45,824 documents** to review and minimal time for quality control.

Seeking an efficient solution, the firm partnered with DISCO to implement Auto Review, a generative AI solution that reduces traditional bottlenecks associated with human-led review while maintaining accurate results. The case team collaborated closely with DISCO's AI Consulting team to fine-tune prompts for responsiveness and seven issue tags.

The results were remarkable. Using the optimized prompts, the review was completed in just **2 hours and 12 minutes while achieving 95% recall and 91% precision**—significantly exceeding typical human review metrics.

For the firm, known for punching above its weight class, Auto Review's speed, reliability, and accuracy became a major asset. The lead associate's verdict was clear: "We would absolutely use Auto Review again."

“

No matter how good a review team is, there's no substitute for the lawyers closest to the case—but it's not feasible for my team to review 50,000 documents in a month. With Auto Review, we could more effectively harness our expertise, working directly with DISCO's AI consultants to hone the tag prompts and focus our time on QC.
