FIREMON

Real-Time Visibility and Automated Compliance for Financial Services

A multinational financial services organization with operations across Europe, Asia, and North America.

Use Cases: Enforce Compliance, Manage Change

Industry: Financial Services

🔍 The Challenge

With increasing pressure to meet a complex mix of global and local **compliance requirements** like PCI DSS, ISO 27001, DORA and SWIFT, the institution needed to replace its underperforming policy and vulnerability management solution. The prior vendor lacked **real-time** analytics, flexibility, and scalability, resulting in slow deployments, minimal use of purchased capabilities and ongoing gaps in policy visibility across regionally segmented operations.

The company sought to:

8x

Faster to implement policy changes across 1,000+ devices

<30 Days

Deployment of core capabilities, significantly faster than previous vendor

- Grant localized visibility to regional teams without compromising global oversight

- Orchestrate compliance assessments across frameworks like PCI, SWIFT, DORA, and ISO 27001

- Run real-time security analytics across hybrid environments (on-prem and cloud)

- Automate policy cleanup, certification, and optimization tasks with human-in-the-loop approvals only when necessary

- Build flexible, custom compliance playbooks based on their specific governance needs

95%

**Reduction in time to complete compliance reporting**

⚙ The Solution

FireMon delivered a centralized, scalable **network policy management solution** capable of supporting their 1,000+ network environment including **Cisco ACI**, **Fortinet**, and NSX-T, with seamless onboarding of additional device types through modular device packs.

- Topology mapping and access path analytics provided a complete model of the network, allowing teams to visualize traffic workflows, identify risk exposure, and plan rule changes with precision

- Out-of-the-box, real-time compliance automation enabled continuous monitoring across global frameworks with flexibility to customize assessments to meet local regulatory requirements

- Full rule lifecycle management, including certification, optimization, and cleanup ensure policies remain efficient, secure, and audit ready

- Change automation workflows reduce manual intervention by orchestrating policy changes and only prompting input when human decision-making is required, improving both speed and accuracy

- Collaborative, API-first approach ensured seamless integrations with third party vendors with clear visibility and concise reporting

📊 Results

- 100% of network coverage available via network modeling, offering full visibility through topology mapping and access path analytics, enabling precise control across 1,000+ firewalls, switches, and cloud environments

- 1,000+ devices supported with real-time visibility and policy enforcement

- 100% policy rules evaluated and optimized, ensuring redundant, shadowed, and overly permissive rules were identified and remediated

- <30 day deployment of FireMon core functionality, significantly accelerating time-to-value
About FireMon

FireMon's mission is to improve security operations that will in turn lead to better security outcomes. FireMon delivers industry-leading security policy management, cloud security operations, and asset management solutions. Our platform is the only real-time solution that reduces firewall and cloud security policy-related risks, manages policy changes, and enforces compliance. FireMon's Cloud Defense (formerly DisruptOps) is the only distributed cloud security operations offering that detects and responds to issues in the fast-paced public cloud environments. Our cloud-based Asset Management solution (formerly Lumeta) scans entire infrastructures to identify everything in the environment and provide valuable insights into how it's all connected.
