

Success Story

Freedom Garage Door Services

Website Design/Development, Hosting &
Web Security Services

Challenge

Freedom Garage Door Services was a brand new business in the Tacoma area looking to rapidly develop a strong Web presence in preparation for their official business opening. We worked directly with the business owner Torre Stensland to develop a mobile-friendly and search engine-optimized website that makes an impact for the business.

Implementation

We prepared a variety of design concepts and content ideas to help Freedom get the result they were seeking. In addition to the site's design themes, we also developed designs for the service coverage area map, photo gallery, and tested color options to provide a superior site.

Project Results

After a few rounds of revisions, we delivered a design that Torre 'nailed it' and were able to timely launch the site in conjunction with the business opening. It's a great feeling to help a new business have a solid launch and provide the information and online visibility a business needs. As a full service Web provider, we were also able to help Freedom with:

- - Responsive WordPress Design
- - On-Site SEO Optimization
- - Website Hosting
- - Security Certificate
- - Security Monitoring
