

Success cases

GLOBALFARM

Challenge: At Global Farm, the large amount of specific data prevented accurate decisions from being made to reduce the destruction of medicines., which will lead to a reduction in costs.

Solution: An AI expert was implemented in their ERP (Falcon) that was trained with all the data and with the use of Serenity Star's AI technology. The expert guided the employees allowing them to optimize medications to the maximum and therefore reduce costs.

RESULTS

95% less drug destruction 1M€ annual savings
