Cloud WAN

## Local Government Cloud Evaluation

### Problem

The fourth-largest city in the state was evaluating cloud providers and needed VPN connectivity between on-premises resources, dev/test projects, and the production launch.

### Solution

Trek10, the AWS SI partner helped the city built out the AWS environment. They used VNS3 as a VPN to connect on-premises and the new AWS resources, and availability for region failover.

### Outcome

The city used VNS3 first as a connection to their cloud evaluation deployment in AWS. After Trek10 transferred the VNS3 account to the city, they began using VNS3 to connect their AWS resources to connect and enable NAT-Traversal.
