Migrating Controls Quickly and Simply with Syncfusion

—Héctor Reyes,
CTO, Dya Software.

"In a few days, we reproduced the previous functionality and added new components with minimum effort and without a single line of code."

BENEFITS

Reduced development time.

Improved application performance.

Created a multiplatform product.

CHALLENGE & SOLUTIONS

Héctor Reyes, CTO of Dya Software, needed to migrate an existing dashboard with a C# backend and JavaScript charts in the frontend to an ASP.NET MVC environment while adding new components. There was limited time to do this, and it proved difficult to meet the client's performance requirements. What Dya Software needed was a set of controls that simplified as much of the process as possible while also providing the necessary functionality to meet the project goals.

Syncfusion's controls proved to be the solution that Reyes needed. The controls were easy to integrate; able to deploy on mobile, web, and desktop; and the simplified and transparent licensing made it easy to get going. On top of that, Syncfusion's support team was able to provide assistance and keep the development process moving.

In just a few days, Dya Software was able to reduce the resource requirements for programming, lowering the cost and time of production. Not only that, but they were able to improve the quality and functionality of the final dashboard over what they would have created otherwise. Syncfusion made it easier, faster, and cheaper for Dya Software to make a better product.
