

# NO NEED TO REINVENT THE WHEEL

“With Syncfusion’s Essential Studio for JavaScript, we could use business-ready, updated web and mobile UI components and avoid reinventing the wheel”.

- Irvin Dominin,  
R&D Technical Lead,  
Sistemi S.p.A.

## BENEFITS

Saved thousands of development hours.

Business-ready and up-to-date UI components.

Quick responses from the support team.

## CHALLENGE & SOLUTIONS

When Irvin Dominin of [Sistemi S.p.A](#) needed to build a web and mobile version of his company’s framework, BUILDER/web, the last thing he wanted to do was waste time reinventing the wheel.

“With Syncfusion’s JavaScript suite, we could use business-ready, updated web and mobile UI components,” said Dominin. “These days, it’s impossible, time and money-wise, to think about writing complex UI web-mobile plugins yourself.”

Sistemi provides a proprietary language that helps developers build and deploy Windows and web applications in a way that lets them focus on their applications instead of technical problems. Dominin’s R&D team also found Syncfusion’s file format manipulation suites for Word and Excel useful to help handle Office integration and document production automation for this framework without the need of complex OLE automation.

By utilizing Syncfusion’s JavaScript controls and file format manipulation libraries, Dominin estimates his company saved thousands of hours of development time. He also said that Syncfusion’s support team was great about quickly responding to their requests. With Syncfusion, Sistemi could focus on getting their framework on web and mobile platforms quickly, instead of being bogged down by creating components already mastered by others.

### Sistemi

Sistemi is an Italian company that has been producing software for professionals and companies since 1976. Sistemi has a consolidated presence in its market and has achieved a meaningful synergy between technological expertise and product quality.
