Kunitz Shoes – a well-known shoe store in Western Canada with multiple locations – has a website that is an enterprise-level, custom WordPress / WooCommerce design and build.

Subtle animations, high-quality product photography and blazing performance complement a variety of subtle UX & UI touches, like a live-updating inventory sync, individual product variation galleries, and much more.

Further, in the background, inventory is kept synced up with a custom-written inventory syncing script that updates 20,000+ product variations twice per hour.

This script interfaces directly with WooCommerce and Products, changing availability, publish status, and much more.
