Challenge: Complex Supply Chain

Solution: TPSynergy implemented its Multi-Tier forecasting system, or the ability of multiple companies to see the supply chain.

Case Study: The customer is a very large cosmetics and beauty products manufacturer and distributor. They have a large and complex supply chain that includes raw material suppliers, contract manufacturers, fulfillment centers, logistics providers, and shipping carriers. They used Oracle E-Business suite as their ERP System and the sharing of current and updated information across the supply chain was a challenge. E-mail and phone calls were not scalable and were causing data issues. From the beginning of the project until the launch date, TPSynergy's professional services team was in full control of the project. They analyzed the current supply chain operations and came up with innovative solutions for complex problems. The project was completed in 3 months and went live on time. Trading partners found the system user friendly and easy to learn. Supply chain visibility was improved and potential bottlenecks were removed. The VP of Supply Chain says that with the Multi-Tier forecasting system and all of the other various features, a good return on investment was achieved quickly.

After careful evaluation of many supply chain solutions in the market, TPSynergy was selected as the partner to implement a supply chain collaboration portal. Feature to feature, TPSynergy matched or exceeded all the alternatives and provided a lower cost and simpler system.
