## Education

BI SERVICE

LIST SYNC

### CHALLENGE

Our client in the education sector had been tracking absences by school in SharePoint Online. The list has several lookup fields for other related information. The information needs to be reported upon and charts created to show performance against targets.

### SOLUTION

After close consultation with the client we implemented ThorApps Online Services, making use of the BI Service we were able to create an automated multi-page report with charts detailing performance against target.

### RESULT

The client was able to get automated reports to ensure that absence was effectively tracked and reported to ensure that targets were met or exceeded.
