

E-Invoicing

Challenge: Having to process large amounts of invoices manually is an arduous process and takes a considerable amount of time.

Solution: TPSynergy allows for invoice creation through Excel file upload or EDI integration, and all of the payment details and statuses update on the portal automatically. This saves many hours and reduces the risk of human error.

Case Studies: A very large manufacturing company has thousands of suppliers and having to deal with invoices was a major task. It wasted valuable time and led to suppliers asking about their payments. Once they adopted TPSynergy, however, all of their invoices were automated and accessible. This saved them countless hours and led to more supplier satisfaction.
