

# CASE STUDIES

## Mining

BI SERVICE

### CHALLENGE

Enable our client in the mining industry to easily print their Power BI dashboard and score card data, especially when there is more than one page of information.

### SOLUTION

By employing BI Service by ThorApps the client was able to generate paginated reports via the free Visual Studio community edition. They were then more easily able to present reports as both a dashboard in SharePoint online and print the paginated reports (to PDF or Printer).

### RESULT

No more battling with Power BI printouts! Using the BI Service app now means anyone can not only page through their report pages, but also export their report to PDF for printing.
