

Organized Crime Investigation

Customer: A Law-Enforcement Agency

Solution: Complicated criminal cases are often visualized using old-school methods like white boards, low quality prints, and colored magnets and a thread. ClueMaker provides an easy solution for visualizing much larger datasets from different sources. It also does not matter if the data is structured or not. Putting together data from money flows, phone calls, printed materials and social networks is no longer a problem. Social Network Analysis tool helps literally to "put faces on the money".
