

# CASE STUDIES

## Government

BI SERVICE

### CHALLENGE

Our client in government spent years building vital business reports in SSRS for SharePoint Integrated-Mode, but wanted to migrate to SharePoint Online. With SharePoint Online not providing SSRS, they were at a total crossroads as they could not afford to operate without the business intelligence generated from their reporting.

### SOLUTION

Working closely with the client to understand the essential reports driving their business, we began to build a BI Service solution that would ensure business continuity, provide improved efficiency and provide limited development time.

### RESULT

As well as seamlessly migrating all existing reports to Online Services and creating a secure connection to their SQL server onsite, our client was able to experience business as usual in record time.
