

Leading Third Party Logistics Firm

Goal

Ergonomic study on reduction of unsafe lifts

Duration of study

5 months

In an ergonomic study involving 50 associates making on average 2,000 lifts per day, exosuit usage was shown to reduce the number of unsafe lifts. Over the course of 5 months, daily unsafe lifts went from 760 on day 1, down to 485 by month 5, indicating the SafeLift exosuits encourage safer movements through their construction and application of assistive forces, as well as the SafeLift reports.

36%

Reduction in unsafe movements

275 / Day

Unsafe lifts eliminated for each worker wearing SafeLift exosuits.

70,000 / Year

Unsafe lifts eliminated for each worker wearing SafeLift exosuits.
