

# Medit Corp: Building a borderless business in digital dentistry

Medit Corp, a global innovator in 3D dental imaging and software, is transforming digital dentistry by delivering precision and simplicity to clinics worldwide. While it is most well-known for its intraoral scanners, it began offering integrated applications and software for dental institutions and professionals.

With a growing number of scanner models in its product line, Medit's existing ERP solution simply could not catch up. It used an in-house Manufacturing Execution System (MES) with a domestic ERP system, but the increased complexities of manufacturing new models meant that it would be expensive and inefficient to continue working on these disparate, siloed platforms.

With ambitions to expand into new markets like US, China and Europe, it was the perfect opportunity for Medit to modernize its operations to match its global ambitions – streamlining key processes, empowering its workforce, and enabling smarter decisions through a unified digital foundation that supports innovation. This was when they looked to SAP's comprehensive suite of solutions for its next phase of growth.

## The best digital systems for the leader in digital dentistry solutions

### Before: Challenges and opportunities

- Domestic solutions could not support a growing product line and the demands of global expansion
- Manual data integration complicates reporting and often results in inaccuracies
- Need better insight into profitability and traceability in product quality management
- An absence of a unified HR system of record and talent management system for the company's growing global workforce

### Why SAP

- Leverage SAP best practices to improve on existing processes, thereby reducing manual tasks and ensuring reliable financial information
- End-to-end support for diverse global business processes from international sales and fulfillment to recruitment and performance management

### After: Value-driven results

- Unified data management in production, procurement & inventory to smoothen manufacturing process
- Improved integration and decision-making transparency enhanced collaboration across all departments, about 450 people employees.
- Reduced manual workload in financial processes, increased consistency, and supported advanced quality management systems, contributing to higher employee productivity
- Full visibility and analytics for Medit's global workforce, along with a fully digital employee experience

“SAP Cloud ERP Private has empowered us to elevate our core capabilities and services, establishing a solid foundation for global expansion. By leveraging SAP SuccessFactors’ real-time analytics and dashboard-driven decision-making, we significantly enhanced operational efficiency.”

Jonghwan Choi, Information Strategy Team Leader, Medit Corporation
