

# newtopia

A highly personalized mobile solution offering individual treatment plans for high-risk patients

What was done by DIGIS:

**Developed Back-end portion of the System and its mobile application**  
following the Client's requirements and expectations

**Used simple but very flexible and functional architecture approach**  
to meet the Client's requirements and ensure superb user experience and performance

**Added integration with Google Fit, Apple Healthkit, and Fitbit**  
to make the system truly universal and cross-platform

**Enhanced the System with push notification feature**  
in order to keep the end users posted on their progress

**Injected data encryption across the whole system**  
to ensure all user data is safe and secured
