### Automatic Detection Of Dangerous Situations At Ski Lifts

Consulting

Video Analysis

Pipeline & Tooling

When passengers are riding the ski lift or are trying to get on or off the lift, dangerous situations can occur. In these cases, the ski lift has to stop in time to avoid serious accidents.

An AI-powered monitoring system detects potentially dangerous situations from a live video feed in realtime. The ski lift is then automatically slowed down or stopped. The system helps prevent harm to passengers and increases the safety of the ski lift.
