Presbyterian Foundation

• • • • •

A vital part of the Presbyterian Church (USA), the Foundation cultivates, attracts, and manages financial resources of individuals and institutions to further Christ's mission.

The Problem

The Presbyterian Foundation is a billion-plus non-for-profit religious bank that requires lots of scrutiny. Three years ago, they moved their entire data center offsite which became massively expensive. In addition, PCI financial compliance was difficult to maintain and control in that IaaS environment and support was costing them dearly.   It was time to bring their data center in-house.

The Solution

The Presbyterian Foundation came to Matrix Integration pursuing an improvement.   We offered them with a brand-new platform that meshed perfectly with their existing Cisco environment built on Cisco HyperFlex. It was an elegant solution utilizing 3 servers and Veeam backup with VMWare. The primary data center was finally brought back home and rehydrated outside the cloud.

The Result

Matrix reduced Presbyterian Foundation's costs, simplified their platform, allowed them greater control, and made compliance easy. They've got smaller, more powerful boxes. This resulted in an ROI which was less than nine months!
