

# RETROTAX

Full-service administrator of the federal and state tax credit and incentive programs for business

DIGIS reworked the legacy system to add new features and upgrade its functionality.

## Remastered Tax Credit ID (tax credit screening platform)

to add integration with Google Drive API and build custom API gateways for enabling connectivity to Retrotax partners

## Built Retrotax Plugin

to create a highly configurable tool easily building into partners' websites and allowing to easily register new employees in Retrotax TCID

**Developed Retrotax FEZ Application**

to implement an SPA serving as an internal tool that retrieves and validates address of RetroTax clients by geographical attribute; helps qualifying the matching clients for specific tax credit programs

**Participated in developing Selenium**

to build a RetroTax's internal application running parallel tests via a web configuration panel, on multiple OS, browsers, and versions

**Enabled IBM Watson operation via Web**

to allow working with local user's file systems and automate document recognition process and then upload them to RetroTax TCID
