

DELIVERING MULTIPLATFORM SOFTWARE ON TIME WITH SYNCFUSION

“Using Syncfusion controls really did save a lot of time for our team. They didn’t have to focus on the lists and grids.”

Riana Rambonimanana
CIO, Ikosoft

BENEFITS

Created a multiplatform product.

Received adequate support.

Reduced development time.

CHALLENGE & SOLUTIONS

Multiplatform development is one of the most important areas of development today. While developing a new line of software for multiple platforms, Riana Rambonimanana, the CIO of Ikosoft, found himself short on time and in need of a wide variety of controls.

Other vendors didn’t offer the variety of controls that he needed, which meant either a costly and cumbersome web of contracts or a time and resource-consuming effort to design all the necessary components from scratch. In addition, Ikosoft needed components for ASP.NET MVC, JavaScript, and WPF. Even if they found the variety they needed, could they find a workable solution to get those controls on all the platforms they supported?

Luckily, Syncfusion was able to address all of these problems. Syncfusion supports all of the platforms Rambonimanana needed, and also offers over 800 distinct controls that provide benefits both great and small. With just Syncfusion’s suite, Ikosoft’s team could implement everything they wanted in a significantly shorter span of time. On top of that, Syncfusion offers world-class support to facilitate development, which Rambonimanana’s team found crucial to meeting their goals.

Riana Rambonimanana found that creating an entire line of software for multiple platforms within a tight deadline wasn’t an impossible dream. With Syncfusion’s multiplatform support, massive library of controls, and unparalleled support, Rambonimanana was able to meet his goals.
