

SCI INFRASTRUCTURE, LLC - SEATAC, WA

If you have a project with extensive and complicated underground piping work, there is no better contractor in the northwest to turn to than **SCI Infrastructure, LLC** - a SharpeSoft friend and client for nearly 20 years.

The SeaTac, WA company is the area's leading expert in piping and underground development, road construction, site work, and utilities. Over the last six decades, they have provided the foundation for some of the most ambitious and noteworthy projects in the northwest, serving local, state and federal agencies as well as commercial and private developers of all sizes.

The company traces its origins to 1951 when brothers Armondo and John Scoccolo began doing grading work for local builders. By the end of the decade, Scoccolo Construction had expanded into public highway work, subcontracting topsoil layering and hydro seeding for area highway contractors.

The company incorporated in 1961 and operated until 2001 when Armondo turned the company over to his sons, Mark and Patrick and changed the name to SCI Infrastructure, LLC.

The company is active in both local and national construction trade organizations, and every year in June they sponsor the annual Dozers Days festival in Puyallup, a family event where kids get to operate all types of heavy equipment.
