## Mobile scheduling software improves team communication at regional healthcare facility

Teaching hospital providing award-winning care through compassionate caregivers and clinical expertise.

*"The ability for associates to contact each other or a manager contacting an associate utilizing the mobile application adds an efficiency we didn't expect. Overall a great addition to our care sites and associates!"*

*– Jenessa Williams, Chief Nursing Officer and Administrator*

Prior to When I Work, Jenessa was using a different software to complete scheduling from week to week. However, its inability to be accessed remotely made scheduling a cumbersome task to execute. She wanted software that was just as mobile as her and her staff. Not only did When I Work streamline the scheduling process at SCL Health-St. Joseph, it made scheduling mobile and had a major impact on team communication. Jenessa says, "When I work is user-friendly for all, managers and associates included. We have multiple roles across several care sites and When I Work makes scheduling and communicating a breeze."
