

Satellogic Transforms with Solumina MES

Connecting their operations; giving them full traceability, smoother workflows, and data to power every satellite they build.

THE CHALLENGE

Keeping up with rapid engineering changes and parallel production.

THE GOALS

- Enable fast iterations, agile manufacturing, and **full traceability** for every component.
- Scale production while maintaining quality, flexibility, and **seamless ERP integration**.
- Provide a **secure, modern, web-based interface** usable across all devices.

**GLOBAL COLLABORATION
+ LOCAL MANUFACTURING
SUCCESS**
Solumina

Solumina MES is helping Satellogic grow outside Uruguay.

By partnering with TATA Advanced Systems in India, Satellogic is using Solumina to duplicate its production setup and build satellites locally—some of which are already on their way to space.

THE SOLUTION

After evaluating 18 systems, Satellogic chose **Solumina** for:

Modern Technology

Scalability

Proven Client References

Security

Discrete Manufacturing

Change Management

Traceability Tools

Ease of Integration

User-Friendly

THE IMPACT

Over two years, Solumina transformed Satellogic's manufacturing process:

Enhanced collaboration and standardization across teams

Improved efficiency and analysis across all plant processes

Positive user adoption and value recognition among engineers and operators

Satellite manufacturing and assembly now managed in Solumina's WebUI
