

# Jesuit College Preparatory School of Dallas Strengthens Cybersecurity with SonicWall

A 10-year partnership built on trust and innovation continues to enhance network security and reliability at Jesuit College Preparatory School of Dallas.

## Business need

Jesuit College Preparatory School of Dallas is a private, independent, all-boys high school operated by the Society of Jesus. The institution offers a comprehensive college-preparatory curriculum and boasts a nearly 100% student participation rate in its 116 extracurricular programs, including nationally recognized robotics, debate and athletics programs. Additionally, Jesuit Dallas runs one of the most extensive high school community service programs in the country. To support this dynamic learning environment, the school needed to upgrade its aging cybersecurity infrastructure, ensuring seamless connectivity, centralized security management and advanced threat protection. With a growing student body and an expanding campus that includes a remote site, the school required a solution that would maintain strong network security while facilitating an uninterrupted, high-performance digital experience for students and faculty alike.

## Solution

To address these needs, Jesuit Dallas deployed two SonicWall NSa 5700 firewalls, NSM Advanced for centralized security management, and Capture ATP for advanced threat protection. By integrating Capture ATP into its cybersecurity arsenal, the school significantly strengthened its ability to detect and mitigate cyber threats. Additionally, the campus network expansion included a secure VPN to ensure seamless and reliable access to network resources, whether on the main campus or at the remote site.

## Results

With the SonicWall solution in place, Jesuit Dallas has enhanced its network security and reliability while keeping operational complexity manageable. The school continues to leverage SonicWall's evolving security services, ensuring protection against online threats while maintaining a stable and efficient network. Despite an increase in security services and infrastructure complexity, the institution has upheld a high level of network reliability, providing students and faculty with a secure and seamless digital learning environment. Jesuit Dallas has trusted SonicWall for over 10 years, and their continued partnership has allowed the school to maintain a strong cybersecurity posture while benefiting from SonicWall's commitment to innovation and excellence in network security.

## Benefits

- Strengthened network security with advanced threat protection
- Seamless and reliable connectivity across the main and remote campuses
- Centralized security management for streamlined administration
- Continued partnership with a trusted cybersecurity provider

## Solutions at a glance

- SonicWall NSa Series
- SonicWall Capture Advanced Threat Protection (ATP)
- SonicWall Network Security Manager (NSM)

*"Our relationship with SonicWall has allowed the school to boast a proud track record of network reliability and security that has greatly benefitted our community."*
