## Southeast Christian Church

### Description

This contemporary church was seeking a creative and compelling way to reach its congregation and now can deliver its spiritual message through technologically advanced audio solutions.

### System Features

- The audio system consists of front fill speakers and amplifiers, line array speakers that are designed to deliver high-quality reinforcement of music and speech as well as sub-woofers that increase low frequency directivity.
- The worship center includes a DSP, which offers a rich palette of processing and logic objects, configurable I/O and signal processing as well as a high bandwidth, fault tolerant digital audio bus of 256 channels.
