

Case Studies and Success Stories

Stadium Residential

Dynamic London property group

Stadium Residential were instrumental in the building of the new Arsenal Emirates Stadium. To meet Stadium Residential's growth plans they looked to the power of the Google cloud to allow their staff to work anytime, any where and reduce the rekeying of information. After a comprehensive demonstration and test the Steegle Team audited the files and systems; prepared new hardware; and then migrated the data. Both old and new systems were run in parallel and after our friendly training the staff cutover to the new Google systems. Finally the Steegle Team were on hand to support migration and setup smartphone and tablet devices.
