

Panamanian Bank Superintendence website

The [Panamanian Bank Superintendence](https://xbri.superbancos.gob.pa/es) is an institution dedicated to maintaining order, competitively, reliability and stability in the Panamanian Banking System in order to support financial integration, efficiency and security.

We developed a web application that works as a platform to standardize financial reports provided by the Superintendencies of the Central American countries. Its goal is to simplify the exchange of information between entities.

This application allows users to compare different statements in order to have transparent information that can be exported from the site and it also has a catalog management module that has tables with codes used in financial reports.

Client

Superintendency of Banks of Panama

Project information

Case highlight

- Development of a financial reporting management interface
- Catalog management module development
- Online report viewer with exporter
