TenMast Software

"It's easy to use with no training. I simply logged in, it was very self-explanatory and user friendly. It just works!"

— Jamie Walsworth, Customer Operatons Director, TenMast Software

How Software Teams Use ProjectManager.com

Project Management for the Public Sector

The world of public and affordable housing can get complicated. That's where Tenmast Software comes in. The company provides management, finance/accounting, maintenance, inspections, document management, HUD reporting and executive decision making software for its clients in the housing industry.

That's a lot to coordinate, but not when you have the right tools at your disposal. Tenmast uses ProjectManager.com to manage multiple projects. Even when their software trainers are out in the field using poor hotel internet connections they have a robust platform with which to communicate, see task lists and update their progress in real time so people in the home office know what's going on.

"The first time I used ProjectManager.com the thing that stood out for me the most was the ease of use. I had no training. I was given a login and a password. It was very self-explanatory and user friendly," says Jamie Wadsworth, Customer Operations Director, Tenmast Software.

Whether you're a professional project manager or just the person placed in the lead position for a project, ProjectManager.com will suit your needs. Watch the embedded video above and learn how Tenmast was able to assign tasks, get automated notifications by emails, track the status of their projects and so much more.

"It was designed for project managers, people who are detailed, get to the point, get in, get out, get it over with. That's a project manager, that's what we do, that's what the software does."

Tamika Cherry, Certified Project Manager, Tenmast Software
