For Cybersecurity

The Digital Hub is a cluster of technology, digital media, and internet companies in Ireland. The hub consists of almost 75 companies located in eight buildings, collectively employing 700 people. It is the largest enterprise cluster of its kind in Ireland.

The Digital Hub rightfully places a strong emphasis on digital security, and made sure to implement a VPN that would provide a high level of security. The Digital Hub is confident in allowing teams to work remotely, knowing that their network access will be just as safe as it would in the office.

"Our VPN enables remote workers to securely access our private network and access resources such as internal servers, printers etc. as if they were in our head office. We use an OpenVPN based VPN which is an open source VPN solution. This type of VPN can be hosted behind an existing firewall/router and can be installed on existing hardware or virtual infrastructure."
