

## Case Studies and Success Stories

### The Portland Trust

British non-profit in economic development.

The Portland Trust needed help on standardising on a cloud-based platform and move away from expensive server-based systems. The Portland Trust had a combination of an Azure Server, Office 365 and SharePoint (a hybrid cloud system) but collaboration between the international teams was almost non-existent and needed solutions to their frustrations.

We migrated the trust to Google Workspace for Nonprofits and trained them on how to collaborate effectively: we continue to provide ongoing, end-user support to continually improve Google Workspace usage.
