

# Top 10 Global Bank

This large financial institution replaced their proprietary technologies and brittle DIY implementations for data quality and observability with Acceldata. Now have visibility across all Data Processing on HDP, CDP, ODP, and our stand alone Spark and Kafka Pipelines

## Problem

Visibility challenges across cloud and on-premises data making migrations extremely hard to achieve without loss or errors

46%

improvement in data quality

## Solution

Data Observability across HDP, CDP, ODP and Cloud Data environments with reconciliation and drift checks across all their complex pipelines.

10+

data engineers directed to higher value added tasks

## Results

Stable architecture with resilient data operations that accelerated migration to cloud while maintaining performance of existing Hadoop environment

>200

proprietary scripts and other patchwork approaches replaced
