

# Transit and Terrestrial Transport Authority of Panama website

The [Panamanian Transit and Terrestrial Transport Authority \(ATTT\)](#) is the institution in charge of regulating and managing Terrestrial Transit policies in Panamá. This country is characterized by the amount of traffic found at all times, that's why the ATTT felt the need to automate processes through the use of a website.

With the use of [Drupal 7](#) we migrated the ATTT's old website into a new modern platform that allows for self-managing of the website without relying on third parties.

Users will have all the functionalities at hand to manage their paperwork, consult tickets status, ticket history, their vehicles, audiences and much more. The site has content moderation features that allow different roles to have control over different sections of the website.

There's a new Help Center section with frequently asked questions categorized to facilitate the users' navigation. Additionally, it has tables where users can consult infraction fees and taxi fees, and an integration with Google Maps.

## Client

Transit and Terrestrial Transport Authority of Panama

## Project information

## Case highlight

- Drupal 7 web development
- Responsive web design
- Table development with automatic taxi fare calculations
