

TuSeguro website

The company [Inversiones en Seguros S.A](#) needed to facilitate the process of quotation, comparison, acquisition, and issuance of car insurance policies in the local market, through a website, where the interaction with the end user is automated and completely online. This is how [TuSeguro](#) became what it is now.

Developed in [Drupal 7](#) and [Drupal Commerce](#) with responsive design and easy content management we achieved an [e-commerce](#) site giving the user the possibility of acquiring their automobile insurance online, a product offered by Inversiones en Seguro.

It has 5 steps to obtain this insurance in an estimated time of 10 minutes, once selected the insurance the user can attach documentation in different formats and make the payment facilitating the process to the client.
