

Statutory climate policy with Citizen Space

Call for evidence on renewable, net zero electricity

In order to meet its climate obligations and achieve its carbon reduction plan goals, the UK will need to deploy a great deal of renewable energy and electricity. The UK's Department for Business, Energy and Industrial Strategy (BEIS) conducted a [call for evidence](#) on how UK industry is approaching the financing and deployment of renewable technologies. They used [Citizen Space](#) to hear from industry experts, businesses and stakeholders about what the UK is doing to prepare for a clean energy, future-proof electricity infrastructure, with higher energy efficiency.

Other consultations on climate with Citizen Space include:

- Sustainable fisheries for future generations, UK
- Regulation of felling and restocking consultation, Scottish Government
- Energy and Climate Change Public Attitudes Tracker Review, UK Dept for Business, Energy & Industrial Strategy
- The Future of Forestry in Scotland
- Minerals and waste local plan review, Norfolk, UK
- Electric Vehicle Charging Point Consultation, Richmond-upon-Thames, UK

“Achieving our ambitious climate targets will require significant levels of renewable deployment. Making sure we have the right policy framework to support this deployment will be crucial to delivering net zero while minimising costs for consumers.”
